

MY_ELIZA

A Multimodal Communication System

Siska Fitrianie

2nd of August 2002

Supervisor: Dr. Drs. L.J.M. Rothkrantz

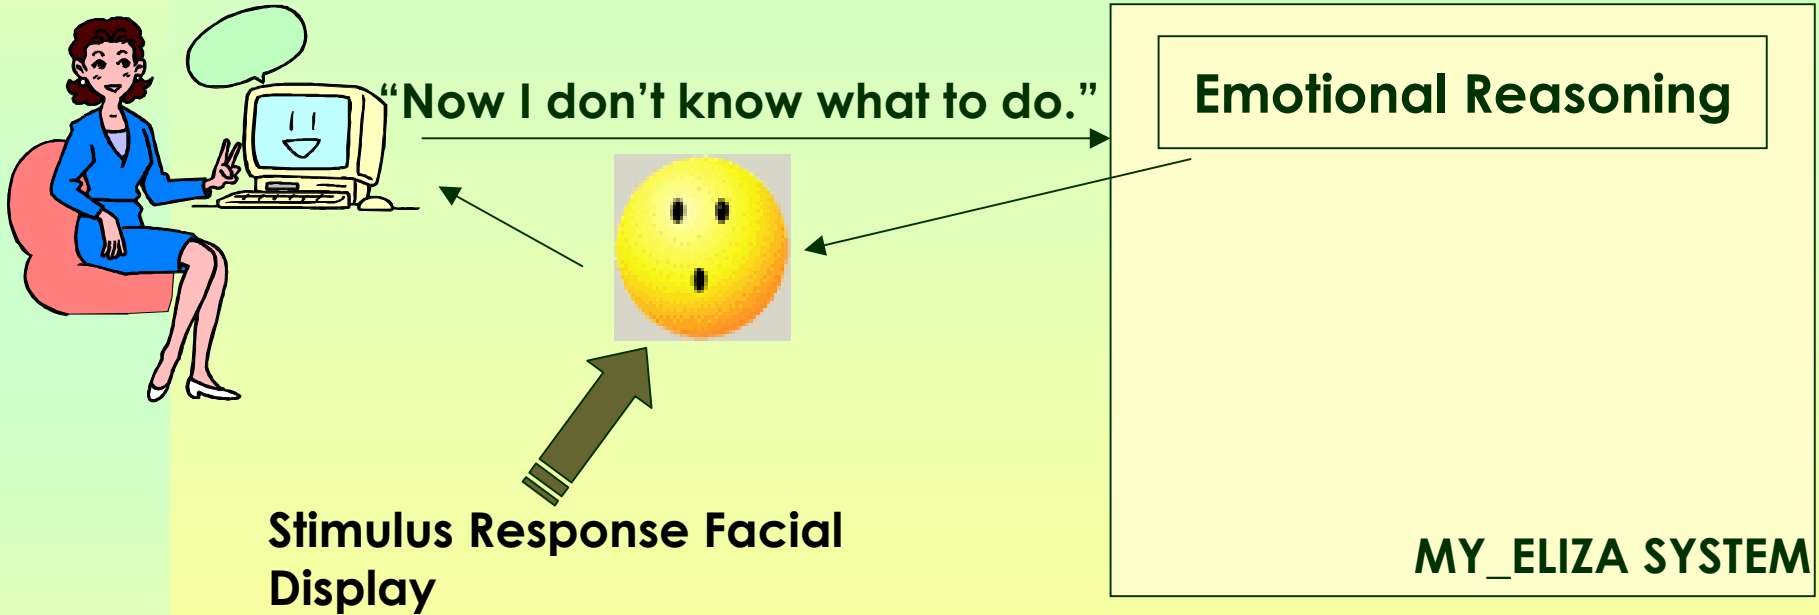

Content

- ② Problem Definition
- ② Question-Answering System
- ② Nonverbal Communication
- ② My_Eliza System
- ② Snapshot System Demo
- ② Conclusion and Recommendation

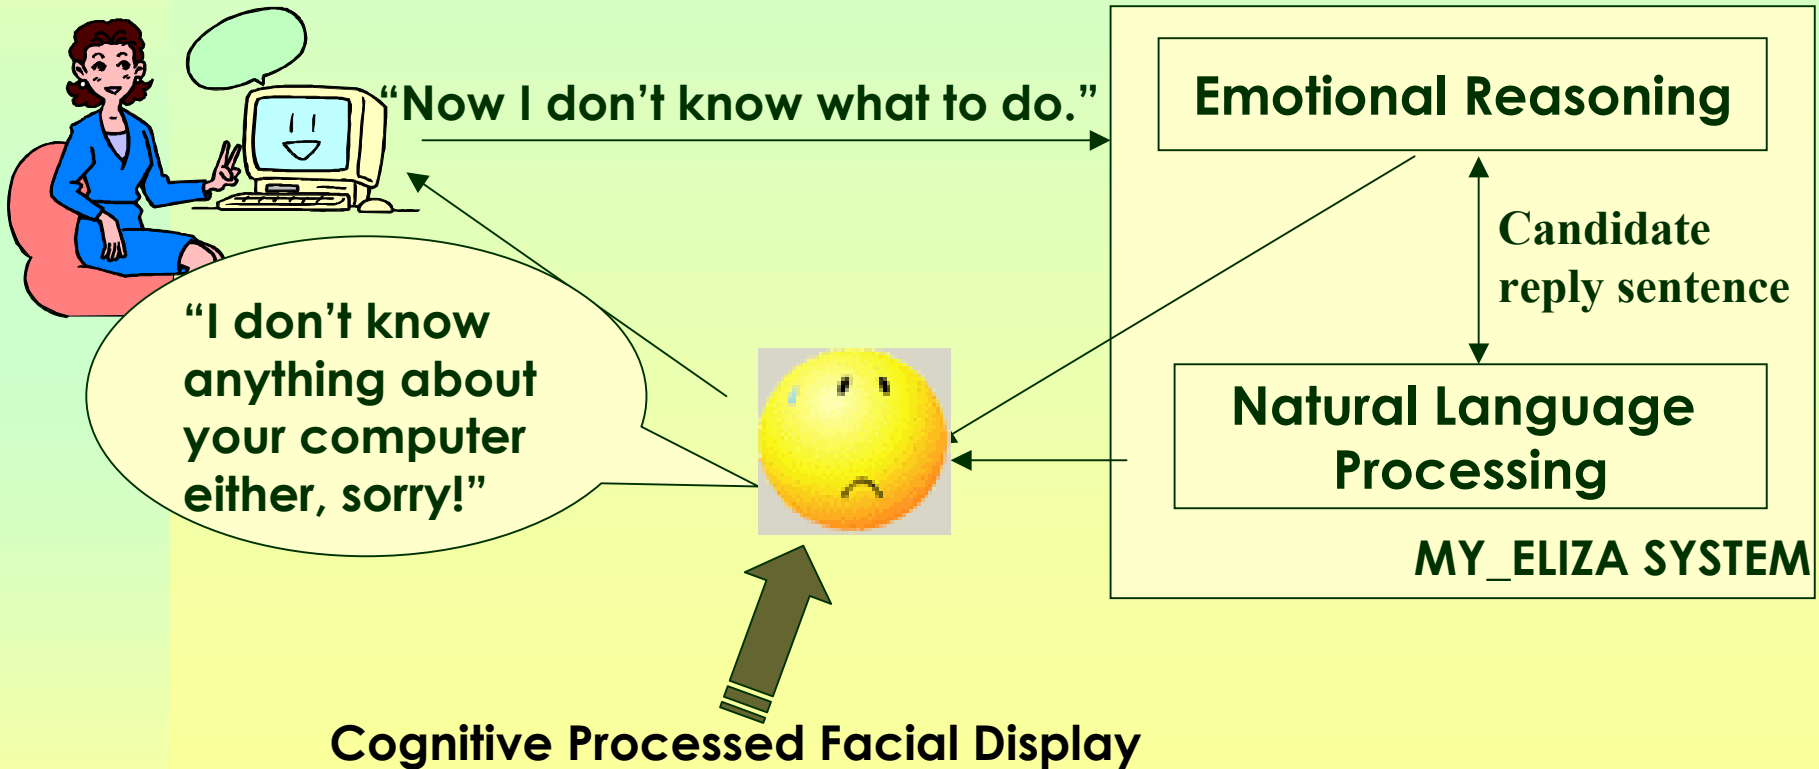

Problem Definition (1)

- ④ Design and develop a multimodal communication system based on Weizenbaum's Eliza.

Problem Definition (1)

- ④ Design and develop a multimodal communication system based on Weizenbaum's Eliza.

Problem Definition (2)

@ Weizenbaum's Eliza

User : My computer crashed.

Eliza: What about machines worries you?

User : Now I don't know what to do.

Eliza: Why do you not know what to do?

@ My_Eliza

User: My computer crashed.

My_Eliza

: Sorry to hear that, what will you do to fix it?

My_Eliza

User: Now I don't know what to do.

My_Eliza

: I don't know anything about your computer either,

My_Eliza sorry!

Problem Definition (3)

- ④ Literature Survey
- ④ Seek Existing System
- ④ Identify Emotion Classification and Emotion Eliciting Factors
- ④ Define and Design a new Model
 - Combining two modalities
- ④ Implementation
- ④ Analysis and Testing new Model

Question Answering System

- ⊙ One of Applications in Natural Language Processing field.
- ⊙ Chatterbot = Chatter + (ro)bot.
- ➡ Simulates typed/written conversation in human natural language.
- ⊙ Example: Weizenbaum's Eliza as Psychoanalyst (1965).

How Eliza System Works? (1)

- ④ Script = Eliza's memory structure

keyword: I

decomposition rule: * I am *

reassemble rule: How long have you been (2)?

reassemble rule: Do you enjoy being (2)?

decomposition rule: * i don't *

reassemble rule: Don't you really (2)?

reassemble rule: Why do you not (2)?

reassemble rule: Do you wish to be able to (2)?

reassemble rule: Does that trouble you?

decomposition rule: * i * you *

reassemble rule: Do you wish to (2) me?

reassemble rule: You seem to need to (2) me.

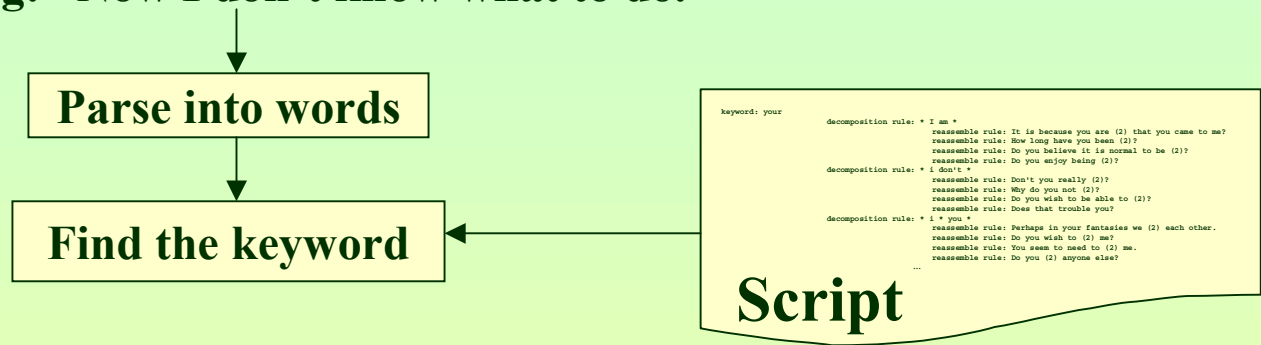

reassemble rule: Do you (2) anyone else?

...

How Eliza System Works? (2)

Input string: "Now I don't know what to do."

How Eliza System Works? (1)

Script = Eliza's memory structure

keyword: I

decomposition rule: * I am *

reassemble rule: How long have you been (2)?

reassemble rule: Do you enjoy being (2)?

decomposition rule: * i don't *

reassemble rule: Don't you really (2)?

reassemble rule: Why do you not (2)?

reassemble rule: Do you wish to be able to (2)?

reassemble rule: Does that trouble you?

decomposition rule: * i * you *

reassemble rule: Do you wish to (2) me?

reassemble rule: You seem to need to (2) me.

reassemble rule: Do you (2) anyone else?

...

How Eliza System Works? (2)

Input string: "Now I don't know what to do."

Parse into words

Find the keyword

Keyword = "I"

Pattern Matching process,
get decomposition rule

```
keyword: your
decomposition rule: * I am *
reassemble rule: It is because you are (2) that you came to me?
reassemble rule: How long have you been (2)?
reassemble rule: Do you believe it is normal to be (2)?
reassemble rule: Do you enjoy being (2)?
decomposition rule: * I don't *
reassemble rule: Don't you really (2)?
reassemble rule: Why do you not (2)?
reassemble rule: Do you wish to be able to (2)?
reassemble rule: Does that trouble you?
decomposition rule: * I * you *
reassemble rule: Perhaps in your fantasies we (2) each other.
reassemble rule: Do you wish to (2) me?
reassemble rule: You seem to need to (2) me.
reassemble rule: Do you (2) anyone else?
...
```

Script

How Eliza System Works? (1)

@ Script = Eliza's memory structure

keyword: I

decomposition rule: * I am *

reassemble rule: How long have you been (2)?

reassemble rule: Do you enjoy being (2)?

decomposition rule: * i don't *

reassemble rule: Don't you really (2)?

reassemble rule: Why do you not (2)?

reassemble rule: Do you wish to be able to (2)?

reassemble rule: Does that trouble you?

decomposition rule: * i * you *

reassemble rule: Do you wish to (2) me?

reassemble rule: You seem to need to (2) me.

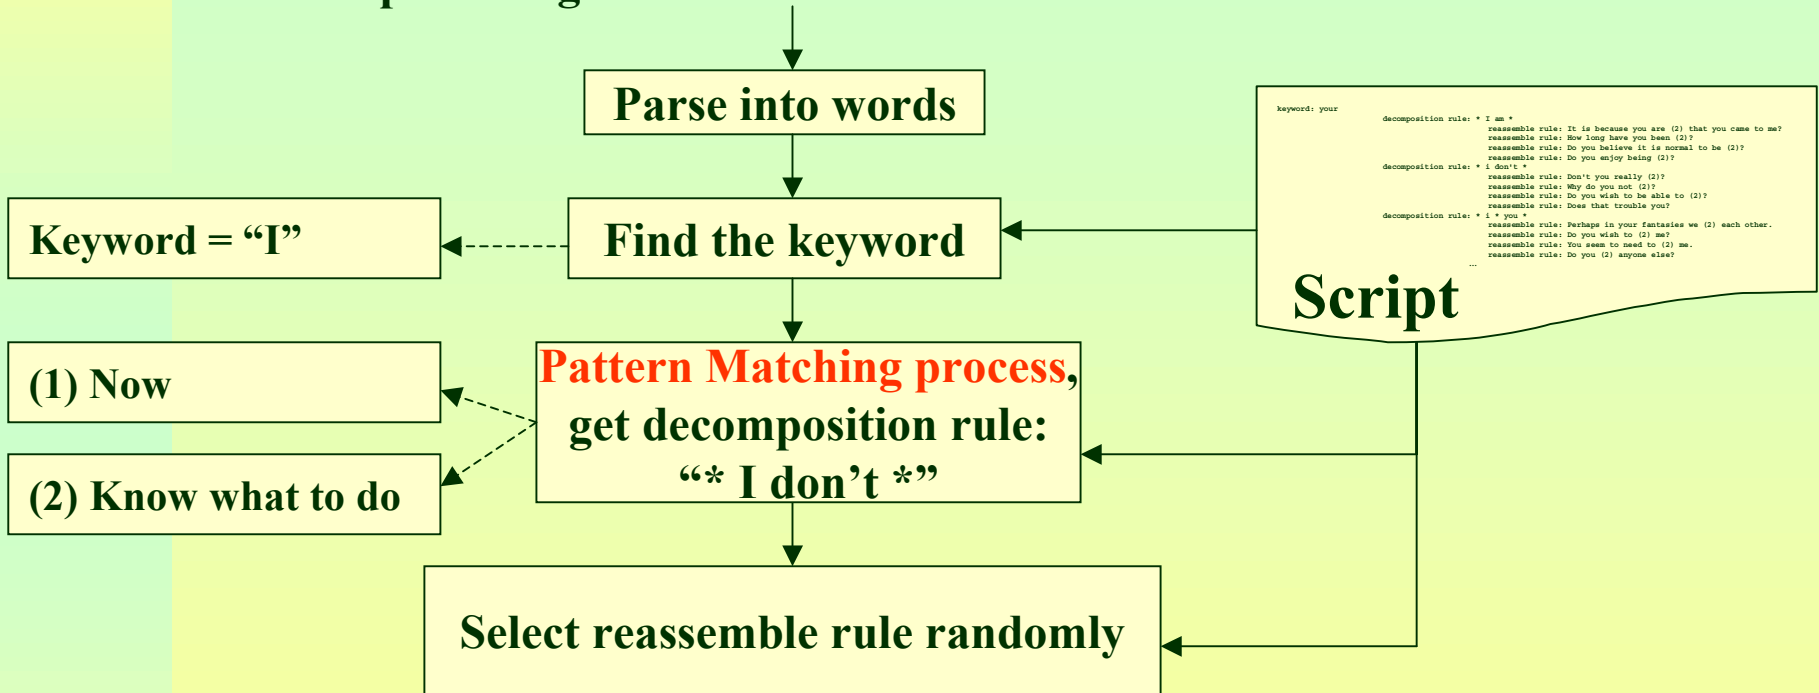

reassemble rule: Do you (2) anyone else?

...

How Eliza System Works? (2)

Input string: "Now I don't know what to do."

How Eliza System Works? (1)

- Script = Eliza's memory structure

keyword: I

decomposition rule: * I am *

reassemble rule: How long have you been (2)?

reassemble rule: Do you enjoy being (2)?

decomposition rule: * i don't *

reassemble rule: Don't you really (2)?

reassemble rule: Why do you not (2)?

reassemble rule: Does that trouble you?

decomposition rule: * i * you *

reassemble rule: Do you wish to (2) me?

reassemble rule: You seem to need to (2) me.

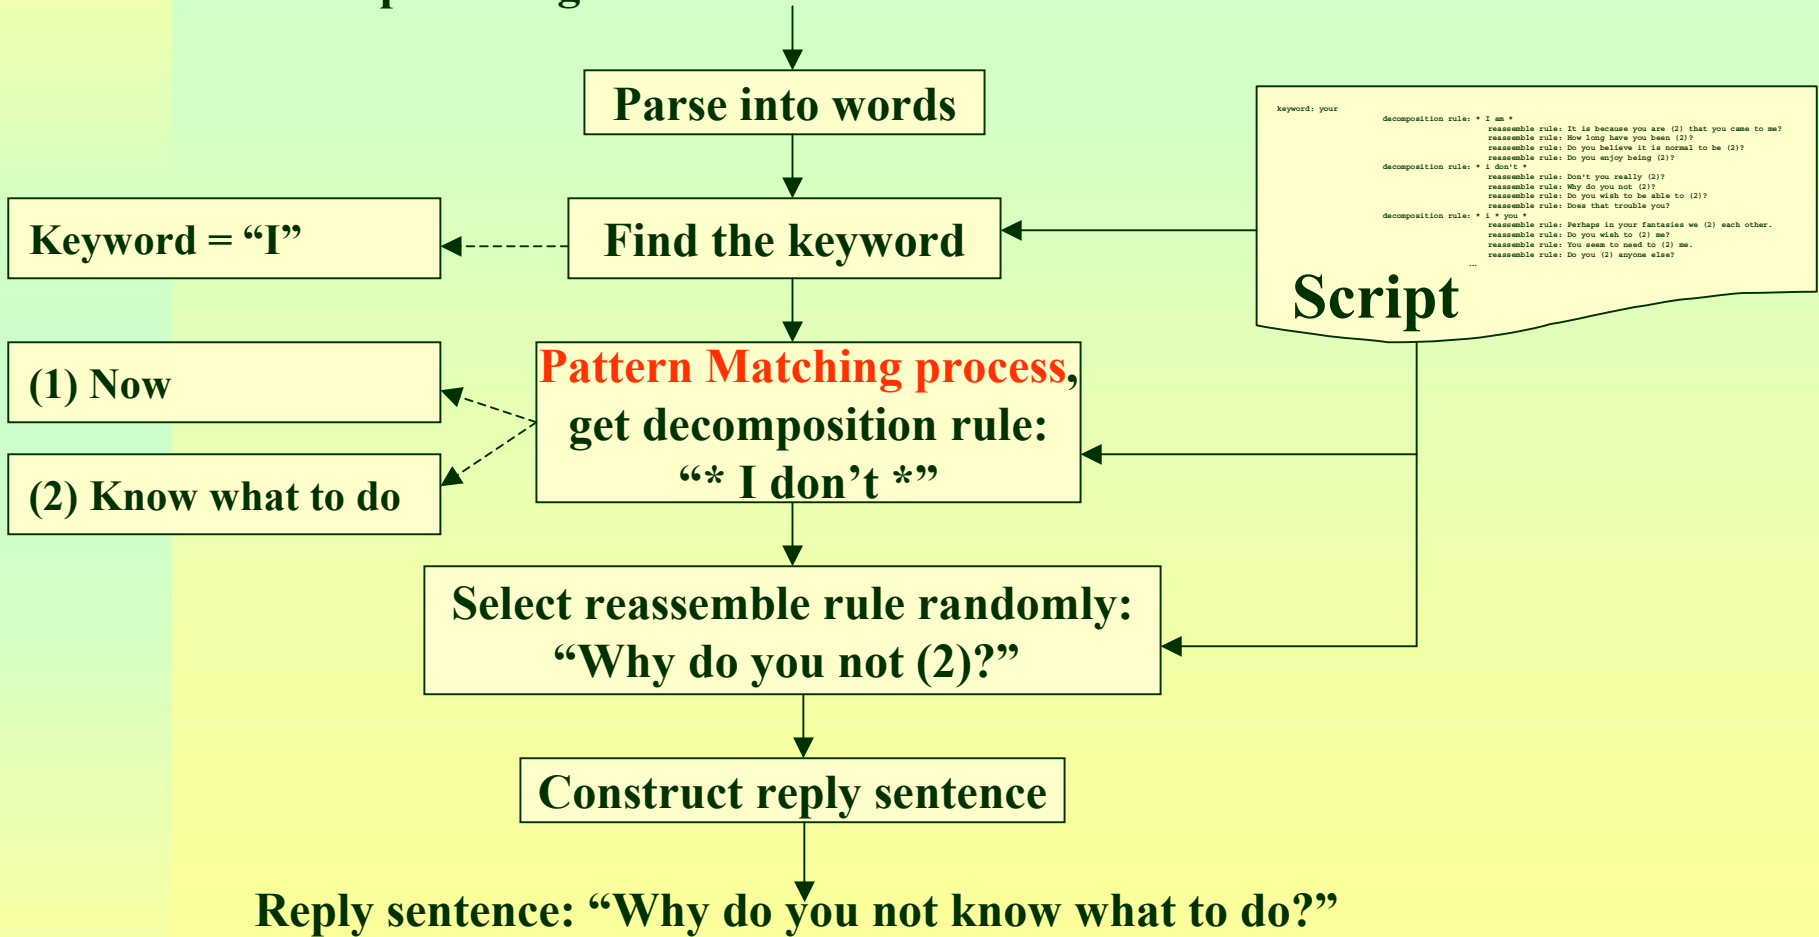

reassemble rule: Do you (2) anyone else?

...

How Eliza System Works? (2)

Input string: "Now I don't know what to do."

Example

Eliza: How do you do. Please state your problem.
User : My name is Siska, we have met each other before.
Eliza: I have told you before, I do not care about names.
User : That's too bad.
Eliza: Please go on.
User : I am really exhausted.
Eliza: Is it because you are exhausted that you came to me?
User : My computer crashed.
Eliza: What about machines worries you?
User : Now I don't know what to do.
Eliza: Why do you not know what to do?
User : I need my computer back on duty as soon as possible.
Eliza: Why do you mention computer?
User : So I can do my work.
Eliza: Why do you say your work?
User : Because I need the computer to do my work,
can't you understand that?
Eliza: Don't you think computers can help people?
User : I know that, but that's not my point here.
Eliza: That's quite interesting.

...

9

Eliza's Approach Limitations

- ⊗ Do not store information from conversation
- ⊗ Lack anaphora analysis
- ⊗ Fail in focusing certain topic
- ⊗ Fail in giving illusion of getting meaning beyond the sentence

Example

Do not store
information

Eliza: How do you do. Please state your problem.

User : My name is Siska, we have met each other before.

Eliza: I have told you before, I do not care about names.

User : That's too bad.

Eliza: Please go on.

User : I am really exhausted.

Eliza: Is it because you are exhausted that you came to me?

User : My computer crashed.

Eliza: What about machines worries you?

User : Now I don't know what to do.

Eliza: Why do you not know what to do?

User : I need my computer back on duty as soon as possible.

Eliza: Why do you mention computer?

User : So I can do my work.

Eliza: Why do you say your work?

User : Because I need the computer to do my work,
can't you understand that?

Eliza: Don't you think computers can help people?

User : I know that, but that's not my point here.

Eliza: That's quite interesting.

...

9

Example

Lack in Anaphora Analysis

Eliza: How do you do. Please state your name.
User : My name is Siska, we have met before.
Eliza: I have told you before, I do not care about names.
User : That's too bad.
Eliza: Please go on.
User : I am really exhausted.
Eliza: Is it because you are exhausted that you came to me?
User : My computer crashed.
Eliza: What about machines worried you?
User : Now I don't know what to do.
Eliza: Why do you not know what to do?
User : I need my computer back on duty as soon as possible.
Eliza: Why do you mention computer?
User : So I can do my work.
Eliza: Why do you say your work?
User : Because I need the computer to do my work,
can't you understand that?
Eliza: Don't you think computers can help people?
User : I know that, but that's not my point here.
Eliza: That's quite interesting.

...

Example

Eliza: How do you do. Please state your problem.

User : My name is Siska, we have met each other before.

Eliza: I have told you before, I do not care about names.

User : That's too bad.

Eliza: Please go on

User : I a

Eliza: I **Lack in focusing to** that you came to me?

User : **certain topic**

Eliza:

User : Now I

Eliza: Why do you not kn

User : I need r **Lack in giving illusion** nputer

Eliza: Why do you mention **of getting meaning** c

User : So I c **beyond the sentence** do my work.

Eliza: Why do you say your work?

User : Because I need the computer to do my work, can't you understand that?

Eliza: Don't you think computers can help people?

User : I know that, but that's not my point here.

Eliza: That's quite interesting.

Expanding Memory Structure

- ⊙ AIML for memory Structure.
- ⊙ AIML = extended-XML script.
- ➡ The idea of Richard Wallace (1995).
- ⊙ Example: A.L.I.C.E (Artificial Linguistic Internet Computer Entity) system = Alicebot

How Alicebot Works? (1)

@ AIML category = Alicebot's memory structure unit

```

How Alicebot Works? (2)

User : My computer crashed.

Alice: Sorry to hear that, what will you do to fix it?

Input string: "Now I don't know what to do."

Reply sentence: "I don't know anything about your computer either, sorry."

Eliza vs. Alicebot

- ⊗ Alicebot has bigger memory structure than Eliza.

<i>Keyword pattern</i>	<i>Input pattern</i>	<i>Topic pattern</i>	<i>History reference pattern</i>	<i>Reply sentences</i>
Keyword	Decomposition rule :			Reassemble rules :
	<pattern>	<topic> :	<that> :	<template> :

→ My_Eliza uses AIML for system's memory structure

Example

Alice: How do you do. Please state your problem.
User : My name is Siska, we have met each other before.
Alice: Hi Siska, what a lovely name. I remember you.
User : Hello.
Alice: Enough! Now, what is your problem?
User : I am really exhausted.
Alice: Is it because you are really exhausted that you came to me?
User : My computer crashed.
Alice: Sorry to hear that, what will you do to fix it?
User : Now I don't know what to do.
Alice: I don't know anything about your computer either, sorry!
User : It's Ok, I think I have to go to computer reparation.
Alice: Good then, Siska. They can help you to fix your computer.
User : I hope I can fix it by my own.
...

Nonverbal Communication

- ➔ Behavior other than spoken or written to represent meaning.
- ⊗ 55% of emotional meaning of a message.
- ⊗ No research of emotion recognition in QA System area!

Research Question

- ➔ Emotion Recognition from the text, how?
 - ⊗ **Emotion Classification.**
 - ⊗ Emotion Eliciting Factor Information Extraction.
 - ⊗ Emotion Recognition.
- ➔ Facial Display Generation.

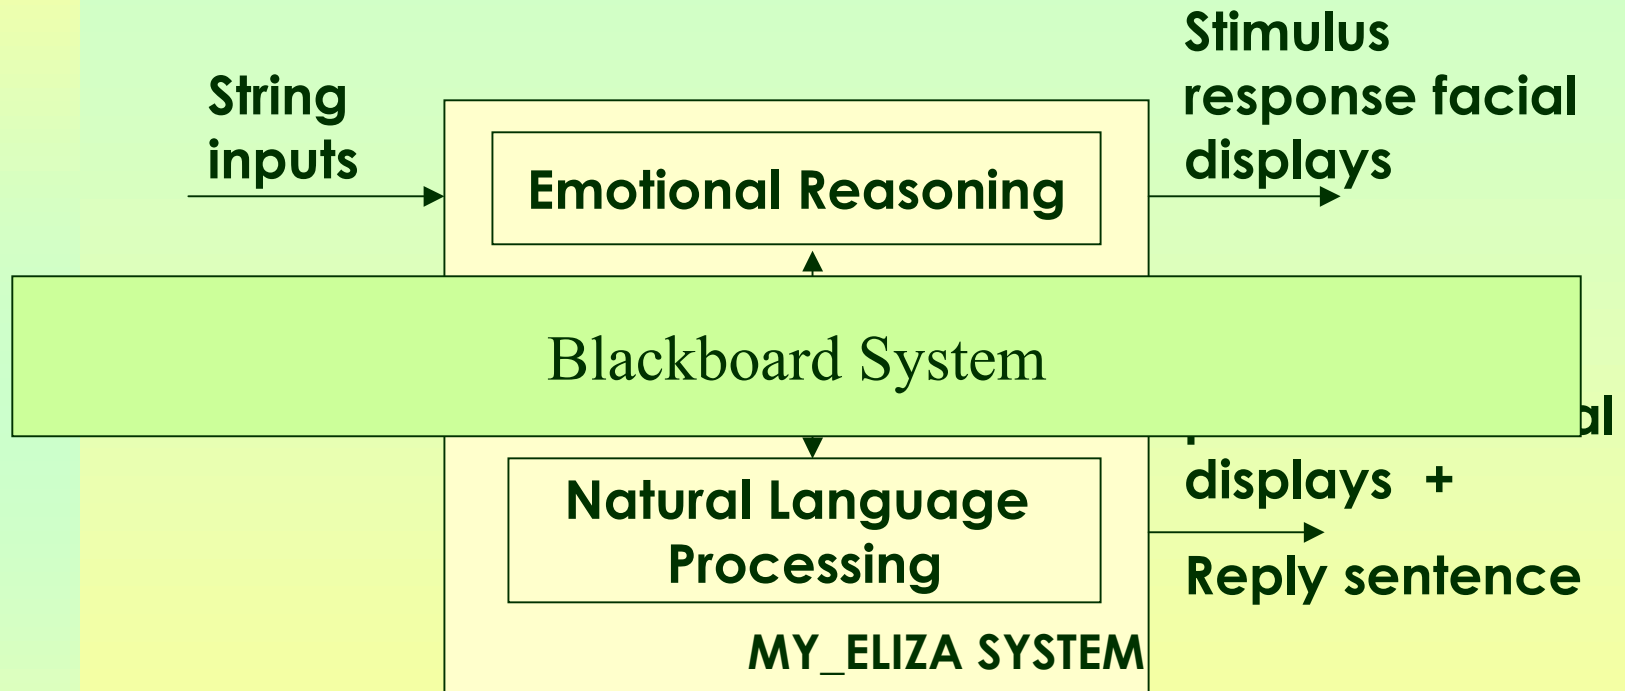

Emotion Classification

- ➔ **Reddy's Basic Emotions types:**
 - ⊗ Pleasant versus unpleasant.
- ➔ **Ekman's Universal Emotion types:**
 - ⊗ Happiness, Sadness, Surprise, Fear, Disgust, Anger and Neutrality.
- ➔ **24 Emotion types of Ortony, Collins, Clore's Theory**

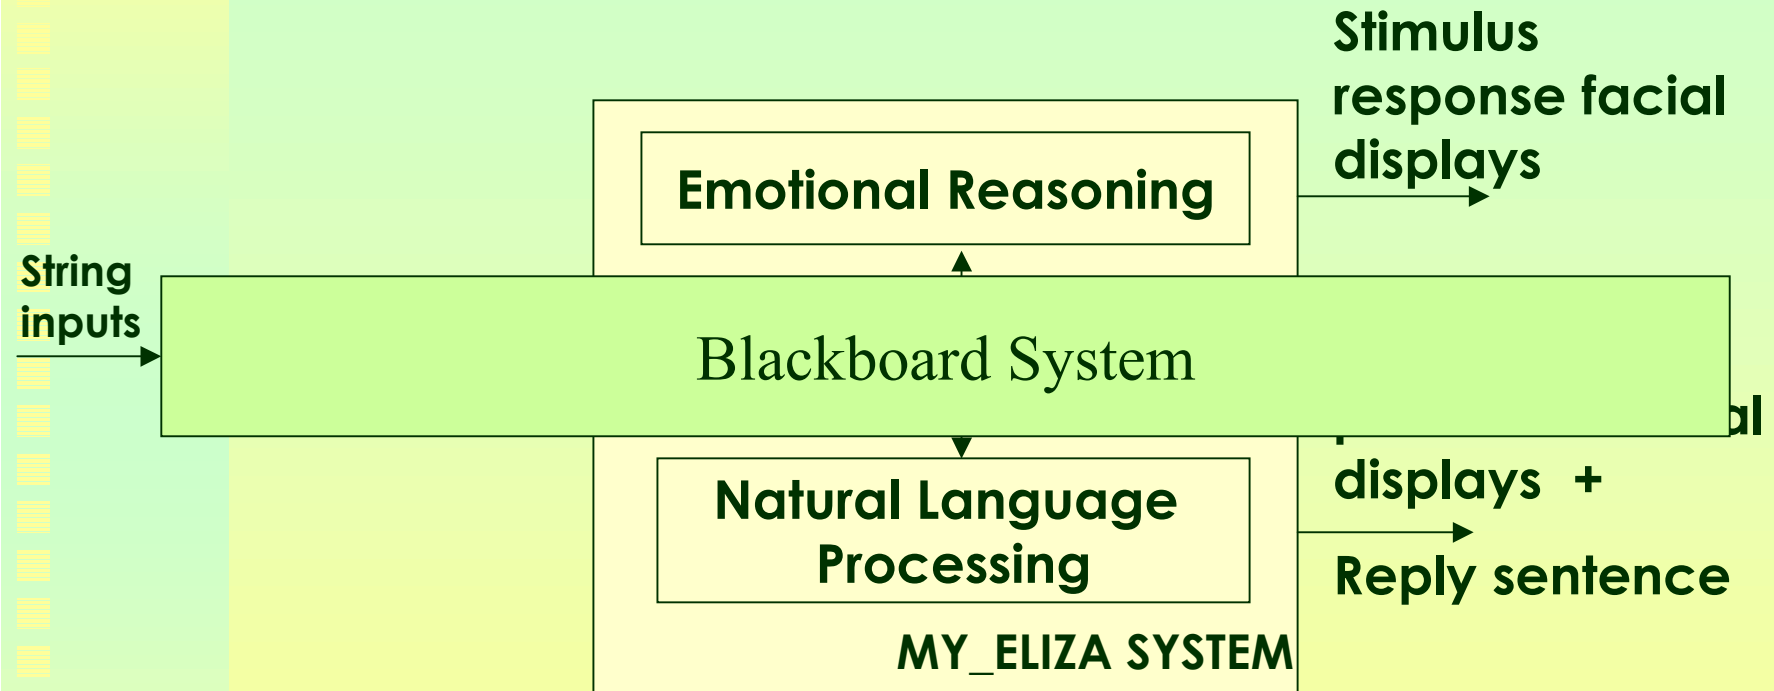

No.	Name and Emotion Type
1.	Joy : pleased about an event
2.	Distress : displeased about an event
3.	Happy-for : pleased about an event desirable for another
4.	Gloating : pleased about an event undesirable for another
5.	Resentment : displeased about an event desirable for another
6.	Sorry-for : displeased about an event undesirable for another
7.	Hope : pleased about a prospective desirable event
8.	Fear : displeased about a prospective undesirable event
9.	Satisfaction : pleased about a confirmed desirable event
10.	Relief : pleased about a disconfirmed undesirable event
11.	Fears-confirmed ; displeased about a confirmed undesirable event
12.	Disappointment : displeased about a disconfirmed desirable event
13.	Pride : approving of one's own act
14.	Admiration : approving of another's act
15.	Shame : disapproving of one's own act
16.	Reproach : disapproving of another's act
17.	Liking : finding an <i>object</i> appealing
18.	Disliking : finding an <i>object</i> unappealing
19.	Gratitude : admiration + joy
20.	Anger : reproach + distress
21.	Gratification : pride + joy
22.	Remorse : shame + distress
23.	Love : admiration + liking
24.	Hate : reproach + disliking

Emotion Eliciting Factor Extraction

- **Emotive labeled memory structure extraction**
- **Emotive lexicon dictionary parser**
- **Goal based emotion reasoning**

Emotive Labeled Memory Structure

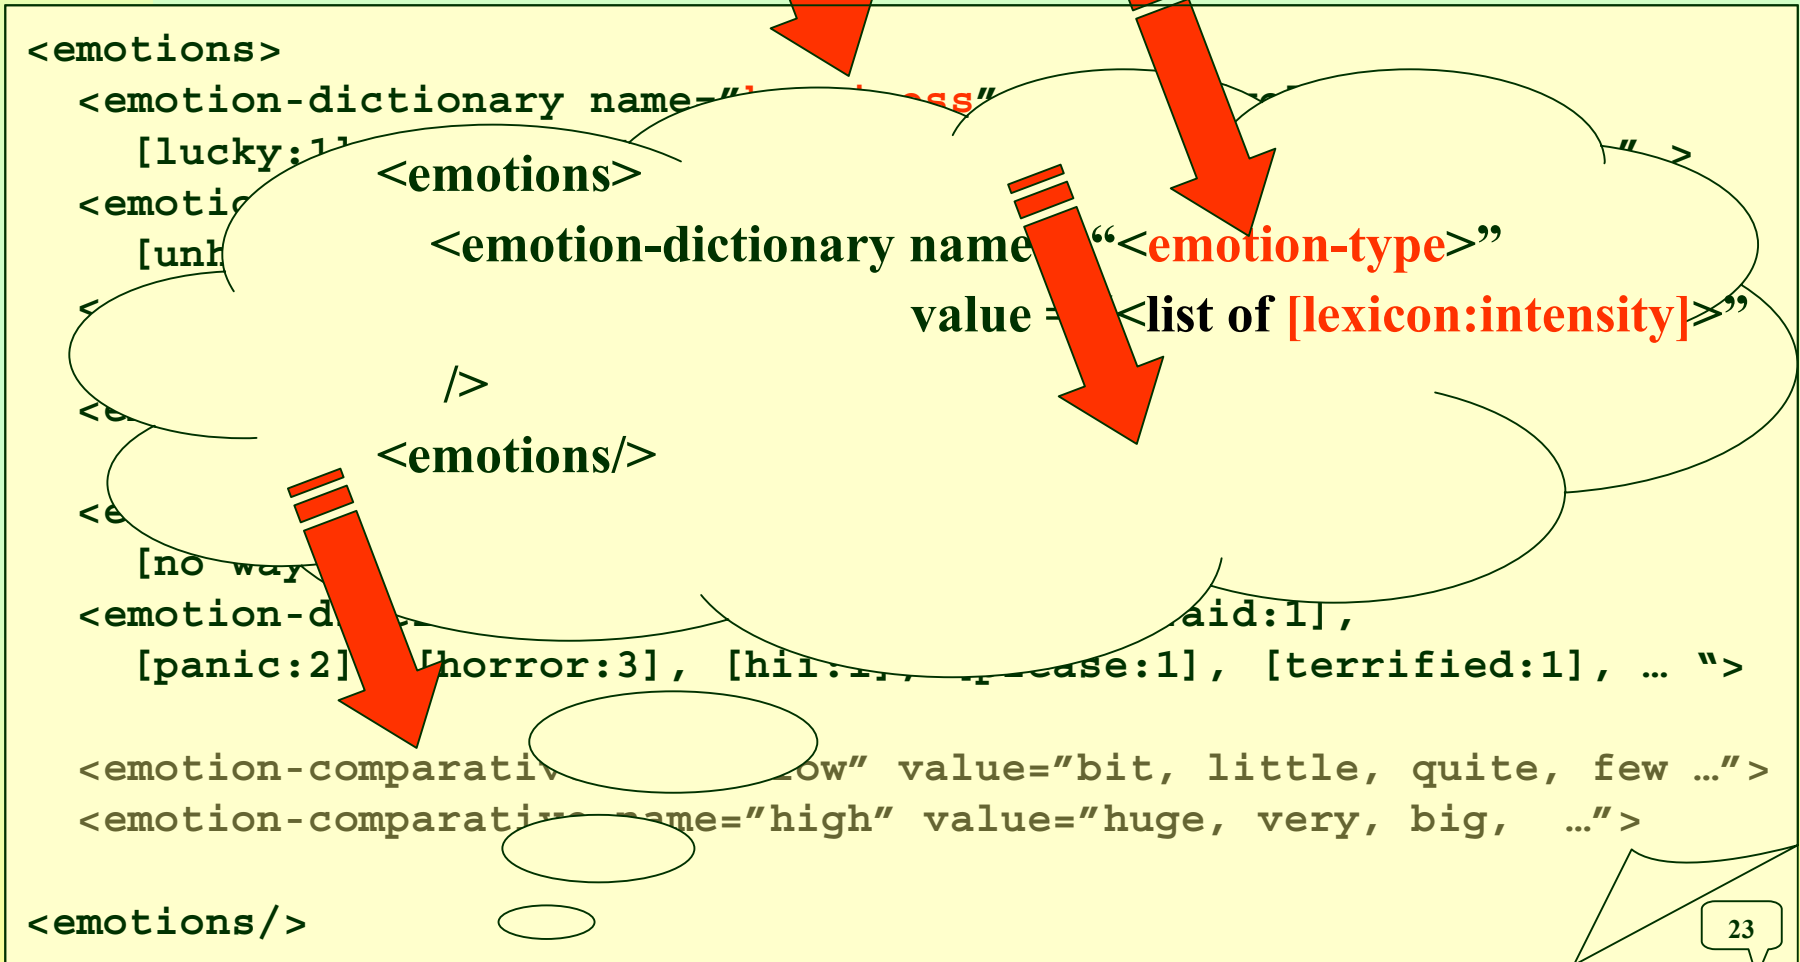

```
<topic name="*">
  <category><affect name="*">
    <that>*/</that>
    <pattern>* CRASHES</pattern>
    <template><think><settopic><star/></think>
    <setaffect>-</setaffect>
    Sorry to hear that.
    <set_it></set_it>
  </category></affect>
</topic>
<topic name="COMPUTER">
  <category><affect name="COMPUTER">
    <that>WHAT WILL
    <pattern>I DO NOT
    <template><random>
      <li><think><setconcern>
        Have you ever had a computer crash?
      </li><think><setconcern>
        I do I.</li>
      <li><think><setconcern>
        I know anything about </get_it> either, sorry!</li>
    </random>
  </category></affect>
</topic>
```

Pattern matching algorithm:

- the same INPUT and TOPIC and THAT and AFFECT
- the same INPUT and TOPIC and AFFECT
- the same INPUT and AFFECT
- The same INPUT
- DEFAULT CATEGORY

Emotive Lexicon Dictionary

Emotive Lexicon Dictionary Parser

➤ Six affective counter C_j

- Parsing user's string input and system's reply sentence
- Result: candidate affective state

$$\forall \text{Lexicon } l_i \in d_i \mid C_{i(t)} = C_{i(t-1)} + I_i \cdot s$$

i = active emotion type

s = summation factor; d = dictionary

$$\forall j \neq i \mid C_{j(t)} = C_{j(t-1)} - \text{distance_value}[j, i]$$

j = {happiness, sadness, anger, fear, disgust, surprise}

Goal Based Emotion Reasoning

- **Goals to reach:**
 - ⊙ Answering question
 - ⊙ Persuasive agreement
 - ⊙ Topical focus
 - ⊙ Explanation statements
 - ⊙ Reflecting feeling
 - ⊙ Alignment
- **System's affective status.**
- **Preferences to evaluate.**

Emotion Recognition

- **Affective Thermometer**
- **Affective Attributing Knowledge Based System**
 - Concern of the other Knowledge Base
 - Cognitive Reasoning Knowledge Base

Affective Thermometer

- Six thermometers for six Ekman's universal emotion types

$$T_{i(t)} = T_{i(t-1)} + I_i \cdot s$$

i = active emotion type

s = summation factor

I = emotion intensity

$$\forall j \neq i \mid T_{j(t)} = T_{j(t-1)} - \text{distance_value}[j, i]$$

$j = \{\text{happiness, sadness, anger, fear, disgust, surprise}\}$

Affective Attributing

- ➔ ~~Determine system's affective thermo~~ Base state classified by 24 OCC's theory emotions types
 - First reaction to user's string input
- ➔ ~~Defined as preference rules~~ Example 1

- User is happy,
- User asks question,
- User's situation type is not negative,
- Maximum system's affective thermo is happy.

→ **Joy**

- **Example 2:**

- User is sad,
- User's situation type is not joking,
- Maximum system's affective thermo is sad.

→ **Sorry-for**

Affective Attributing

➤ Cognitive Process Knowledge Base

☞ System reaction to convey reply sentence

• Example 1:

- User is happy,
- User's situation type is joke,
- System is disgusted,
- System's situation type is negative,
- Maximum system's affective thermo is sadness.

→ **Hate**

• Example 2:

- User is sad,
- User's situation type is negative,
- System is sad,
- System situation type is not joking,
- Maximum system's affective thermo is surprise.

→ **Fears-confirmed**

Facial Display Generation

- ➔ Clustering 24 OCC's theory emotion types into six Ekman's universal types
- ➔ Additional emotion types: uncertainty

<i>Intensity</i>	<i>Emotion name</i>							
	<i>Happiness</i>	<i>Sadness</i>	<i>Surprise</i>	<i>Fear</i>	<i>Disgust</i>	<i>Anger</i>	<i>Neutrality</i>	<i>Uncertainty</i>
<i>Low</i>								
<i>Medium</i>								
<i>High</i>								

My_Eliza versus Eliza and Alicebot

- My_Eliza has bigger memory structure than Eliza and Alicebot.

<i>Keyword pattern</i>	<i>Input pattern</i>	<i>User Affect</i>	<i>Topic pattern</i>	<i>History reference pattern</i>	<i>System concerns to user</i>	<i>Reply sentences</i>
Keyword	Decomposition rule					Reassemble rules
	<pattern>		<topic>	<that>		<templates>

 **My name is Siska. We have met before.**  my_Eliza

 my_Eliza *Hi Siska, what a lovely name. I remember you.*

 **Hello.**  my_Eliza

 my_Eliza *Enough! now, what's your problem?*

 **I am really exhausted.**  my_Eliza

 my_Eliza *Is it because you are really exhausted that you come to me?*

 **My computer crashed last night.**  my_Eliza

 my_Eliza *I am sorry. Is it a PC or laptop?*

 **It is a laptop.** 

Conclusion

- ➔ None emotion recognition research in QA systems
- ➔ Prototype-1's emotion-eliciting factors
= Introduce emotion manually
- ➔ A.L.I.C.E provides robust client-server communication
- ➔ Pragmatic benefit from the use of AIML and preference rules
- ➔ Benefit of incremental development

Recommendations

- ➔ **Develop My_Eliza prototype-2**
- ➔ **Add new emotion eliciting factors**
= **Add new preference rules**
- ➔ **Add new memory structure units**
- ➔ **Add new possible facial displays**
- ➔ **Improve the interface**
- ➔ **Add facility to learn from history**

Acknowledgement

- Prof. Dr. H. Koppelaar

The successive growth of the computer and communications industries will be moderated without further developments in Human-Computer Interaction to create more useful and usable applications.
